

The Lally School of Management

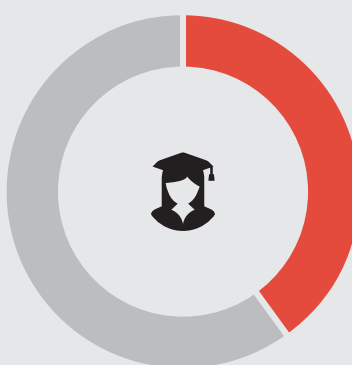

M.S. IN QUANTITATIVE FINANCE AND RISK ANALYTICS

As global financial markets become more complex and interdependent, the importance of 'quants,' or managers who know how to use quantitative models to make sense of them, is growing. As a member of the QFRA program you will study emerging practices, conduct empirical research and construct computational models, and have the opportunity to customize your knowledge with a concentration in quantitative finance, risk analytics, or a generalist track. QFRA students also receive mentoring from ongoing interaction with a highly engaged advisory board of executives in the quantitative finance and risk analytics professions.
