Waiver Rule for MGMT 6100 - Statistics for Managerial Decision-Making

This course develops an understanding of concepts in business statistics and focuses on the application of concepts in problem-solving situations. In particular, students learn to present and describe data, analyze probability distributions, make statistical inferences based on data samples, and develop basic models for prediction and forecasting.

Which students are allowed to waive statistics?
MGMT 6100 Statistics for Managerial Decision-Making is a core course in the MBA, M.S. in Business Analytics, and M.S. in Supply Chain Management programs. Students will be allowed to waive and replace this class if they have successfully taken an equivalent graduate-level statistics class and received a grade of “A.” In such case, the student should provide the course information and syllabus to be evaluated by a Lally School faculty member. Courses that are deemed equivalent can either be transferred, if the course wasn’t applied toward a degree already received and upon approval of the Office of Graduate Education, or if not possible, the student will be offered a replacement class option.

How should you request a statistics waiver?
Send a copy of your transcript documenting a minimum “A” grade in a graduate statistics class and the course syllabus to Roberta Russo at russor5@rpi.edu (Phone: 518-276-2710) by August 13, 2019. Please also provide your name, RIN, and email contact information.
